

SunShield premium solar-reflective coating delivers powerful heat-reduction performance in a broad palette of vibrant, fade-resistant colors — providing flexibility to elevate any property and complement any project design.

### STANDARD COLORS

LIGHT GRAY  
SRI: 50

GRAY  
SRI: 38

SLATE  
SRI: 25

BEIGE  
SRI: 30

KHAKI  
SRI: 38

SANDSTONE  
SRI: 35

RED  
SRI: 22

SKY BLUE  
SRI: 33

GREEN  
SRI: 33

## PREMIUM SOLAR-REFLECTIVE PROTECTION

The sun's heat limits material performance and shortens the life cycle of asphalt pavement. Heat accelerates chemical reactions, including those responsible for the degradation of physical and chemical properties. Asphalt pavement is black, and the surface absorbs most of the sunlight.

The solution is to reflect the sunlight from heat absorbing surfaces and SunShield does just that. SunShield's solar reflective coating reflects the sun's heat away from the pavement, rather than absorbing it, reducing solar-induced heat build-up — and the destructive events associated with it.

SunShield provides reflective, long lasting protection with non-fading color and uniform texture to all asphalt pavements including parking lots, paths and walkways.

### ► High Performance

Premium polymers and graded aggregate create a tough and flexible coating. Lasts up to five times longer than conventional emulsion pavement sealers.

### ► Sustainable

Keeps the pavement cooler, prolonging its life.

### ► Non-Fading

Pure inorganic reflective pigments provide rich, long-lasting color for years of service.

### ► Warranty Protection

Neyra and our national network of licensed contractors provide a two-year dual warranty.

### ► Leed Compliant

Formulated to meet LEED "High Albedo Coatings" solar reflectance requirements.

# SunShield™

## The SunShield Advantage

SunShield solar protective coating is a premium quality, highly pigmented, polymeric surfacing system designed for heat reduction of parking surfaces. The product is formulated with infrared reflective pigments to reduce solar absorption, increase reflectance and achieve the desired solar reflectance index (SRI).

SunShield binds specifically graded sub-angular aggregate for non-slip performance and to achieve a diffuse reflective surface. SunShield contains no PAHs and has an extremely low VOC content.
